Below is the math/physics version of the continuous-time Fourier Transform

$$X(i\omega) = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^{\infty} x(t) \cdot e^{i2\pi\omega t} dt$$

where i is the imaginary number, t is the time variable, and ω is the inverse-time variable. Above, we've shown the equation showing as a line equation, and in this paragraph, we've shown in-line equations.
